

Rice Quality Analysis Report

Generated: 25/4/2026, 7:49:57 am

Job Details

Job ID: 0a84f067-4d41-42bf-b38c-9e2dd0987550
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:49:36 am

Analysis Summary

Rice Type: BD39
Total Grains: 15
Healthy Grains: 9
Unhealthy Grains: 6
Health Score: 60%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: 10 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:
• broken high: 1 grains (7%)
• discoloured high: 5 grains (33%)
• insect infected: 3 grains (20%)
• unhulled: 6 grains (40%)

Quality Charts

Health Score

Healthy (60%) — 60%
Unhealthy (40%) — 40%

Grain Health

Healthy 60% — 60%
Unhealthy 40% — 40%

Health Distribution

broken high (7%) — 7%
discoloured high (33%) — 33%
insect infected (20%) — 20%
unhulled (40%) — 40%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are my assessments:

****Quality Assessment:**** This

batch has a health distribution that indicates 40% of the grains are unhulled, which is not suitable for direct human consumption. The remaining 60% have various defects: discoloured high (33%), insect infected (20%), and broken high (7%). These defects make the rice unsuitable for processing or storage.

****Supply Chain:**** Given the health percentage of this batch (60%), it belongs in the recommended supply chain, "Rice Processing Industry (milling/parboiling)", where these defects can be addressed to produce edible rice products. The milling process will separate the unhulled grains, and the parboiling process can address the discolouration and insect infection issues.

****Shelf Life:**** The shelf life of this batch is only 3 days due to its high percentage of defective grains (60%). These defects can lead to spoilage or contamination, making it FSSAI unsafe for storage. Immediate processing is required to prevent waste and ensure food safety.

****Market Price Justification:**** This batch fetches Rs.0.0/kg in Karnataka because it is not suitable for direct human consumption due to its high defect rate. The market price reflects the low value of this batch, which is better suited for industrial processing rather than being sold as a commodity rice product.

****Storage Instructions:****

- * Store immediately to prevent spoilage.
- * Avoid storing unhulled grains or grains with discolouration or insect infection issues.
- * Keep the storage area clean and dry to minimize contamination risks.

****Farmer Summary:**** This batch has 2 good quality grains (Ipsala) out of a total of 15 grains, which is not representative of high-quality rice. The majority of the grains have defects that make them unsuitable for direct consumption or sale as commodity rice.

IoT Sensor Data

Location: Karnataka
Grain Count: 15
Healthy %: 60%
Dominant Type: BD39
Avg Type Confidence: 97.8%
Avg Health Confidence: 39.4%
