

Rice Quality Analysis Report

Generated: 25/4/2026, 7:57:22 am

Job Details

Job ID: 1757fffd-ac2f-47e1-8dcf-2cd1438e00bb
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:56:58 am

Analysis Summary

Rice Type: BD39
Total Grains: 8
Healthy Grains: 6
Unhealthy Grains: 2
Health Score: 75%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: 127,730 / 1000 kg
Shelf Life: 24 days (process within weeks — ICAR-NRRI high-risk grade)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:
• broken high: 1 grains (13%)
• discoloured high: 1 grains (13%)
• insect infected: 1 grains (13%)
• unhulled: 5 grains (63%)

Quality Charts

Health Score

Healthy (75%) — 75%
Unhealthy (25%) — 25%

Unhealthy 25% — 25%

Health Distribution

broken high (13%) — 13%
discoloured high (13%) — 13%
insect infected (13%) — 13%
unhulled (63%) — 62%

AI Storage & Handling Advice (LangChain / Ollama)

Here are the answers based strictly on the provided data:

****1. Quality Assessment:****

This batch has a health distribution that includes:

- 5 grains (62%)
- 1 grain (12%)
- 1 grain (12%)
- 1 grain (12%)

This indicates that about 3/4 of the batch has defects, mainly due to unhulling and insect infestation. The presence of broken and discolored high-quality grains further affects the overall quality.

****2. Supply Chain:****

The health percentage of this batch is 75%, which is below the recommended standard. Given its average health confidence percent of 52.3, it's not suitable for direct human consumption. Therefore, this batch belongs in the Rice Processing Industry (milling/parboiling) supply chain to improve its quality and make it safe for consumption.

****3. Shelf Life:****

The shelf life estimate is 24 days, which is relatively short due to the presence of insect-infected grains. ICAR-NRRI high-risk grade recommends processing within weeks, emphasizing the importance of timely processing to minimize further degradation.

****4. Market Price Justification:****

The market price per kg in INR (Rs.27.73) for this batch in Karnataka is justified by its suboptimal quality and the need for processing to improve it. The price reflects the compromise

between the batch's defects and its potential after processing.

****5. Storage Instructions:****

- * Store insect-infected grains in sealed containers to prevent further infestation.
- * Keep unhulled grains away from moisture to prevent spoilage.
- * Handle broken high-quality grains with care to avoid further damage.
- * Monitor discoloured high-quality grains closely for any signs of decay.

****6. Farmer Summary:****

This batch has 7 grains of BD39 rice type and 1 grain of Ipsala, making a total of 8 grains detected. Unfortunately, it has significant defects, which affect its quality and shelf life.

IoT Sensor Data

Location: Karnataka
Grain Count: 8
Healthy %: 75%
Dominant Type: BD39
Avg Type Confidence: 94.4%
Avg Health Confidence: 52.3%
