Job Details

Job ID: 2771e48f-2483-4be3-856d-716da95fc13a
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:35:58 am

Analysis Summary

Rice Type: Ipsala
Total Grains: 7
Healthy Grains: 0
Unhealthy Grains: 6
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 19,200 / 1000 kg
Shelf Life: 3 days (immediate processing required)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 1 grains (14%)
- unhulled: 6 grains (86%)

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (14%) — 14%
unhulled (86%) — 86%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

****1. Quality Assessment:****
The health distribution shows that 86% of the grains (6 out of 7) are unhulled, which is a significant defect. Additionally,

there is one broken high grain, which contributes to the overall unhealthy grain count. This batch has no healthy grains.

****2. Supply Chain:****

Given the high percentage of unhulled and broken high grains (86% and 14%, respectively), this batch belongs in the recommended Animal Feed / Waste Management supply chain. The poor quality of the rice makes it unsuitable for human consumption, but its nutritional value can be utilized as animal feed.

****3. Shelf Life:****

The shelf life estimate is 3 days due to the presence of unhulled and broken high grains, which are susceptible to spoilage and contamination. Immediate processing is required to prevent further deterioration.

****4. Market Price Justification:****

This batch fetches Rs.9.2/kg in Karnataka because it is a bulk quantity with significant defects that reduce its value for human consumption. The market price reflects the lower demand and value of this batch, making it suitable for animal feed or waste management purposes.

****5. Storage Instructions:****

- * Store unhulled grains away from direct sunlight to prevent further discoloration.
- * Keep broken high grains in airtight containers to prevent contamination and spoilage.
- * Regularly inspect stored

grains for signs of mold, pests, or other contaminants.

* Handle grains carefully to avoid causing further damage or breakage.

****6. Farmer Summary:****

This batch has a poor quality due to the high count of unhulled and broken high grains (86% and 14%, respectively). Out of the total 7 grains analyzed, only 1 grain was not defective. This batch is best suited for animal feed or waste management purposes, as it does not meet the standards for human consumption in Karnataka.
