

Rice Quality Analysis Report

Generated: 25/4/2026, 7:56:12 am

Job Details

Job ID: 2f7b9e7f-5dd4-4bfe-a79e-5e8d211a7818
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:55:50 am

Analysis Summary

Rice Type: BD39
Total Grains: 8
Healthy Grains: 6
Unhealthy Grains: 2
Health Score: 75%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: 140,780 / 1000 kg
Shelf Life: 24 days (process within weeks — ICAR-NRRI high-risk grade)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:
• broken high: 1 grains (13%)
• discoloured high: 1 grains (13%)
• insect infected: 1 grains (13%)
• unhulled: 5 grains (63%)

Quality Charts

Health Score

Healthy (75%) — 75%
Unhealthy (25%) — 25%

Grain Health

Healthy 75% — 75%
Unhealthy 25% — 25%

Health Distribution

broken high (13%) — 13%
discoloured high (13%) — 13%
insect infected (13%) — 13%
unhulled (63%) — 62%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

****1. Quality Assessment:**** This

batch of BD39 rice from
Karnataka has a health
distribution breakdown of:

- * Unhulled: 5 grains (62%)
- * Insect infected: 1 grain (12%)
- * Broken high: 1 grain (12%)
- * Discoloured high: 1 grain (12%)

This means that out of the total 8 grains analyzed, 6 grains are considered healthy, while 2 grains have defects. The unhulled and insect-infected grains are likely to affect the overall quality and appearance of the rice.

****2. Supply Chain:**** Given the health percentage of 75% (6/8), this batch belongs in the recommended supply chain, "Rice Processing Industry (milling/parboiling)". This is because milling or parboiling can help remove impurities and defects, making the rice more marketable and safe for consumption.

****3. Shelf Life:**** The estimated shelf life of 24 days is due to the presence of high-risk grade defects like insect infection and discoloration. These defects can lead to contamination and spoilage, reducing the shelf life of the rice. It's recommended to process this batch within weeks to minimize quality degradation.

****4. Market Price Justification:**** The market price per kg in INR is Rs. 40.78 due to the relatively high health percentage (75%) and the presence of some defects that require processing or removal before sale. The

price reflects the value of the rice after considering its quality and the costs associated with processing or parboiling.

****5. Storage Instructions:****

- * Store in a cool, dry place to prevent moisture accumulation.
- * Avoid storing near strong-smelling substances, as insect-infected grains can transfer odors.
- * Keep unhulled grains away from light to prevent discoloration.
- * Regularly inspect stored rice for signs of spoilage or pest infestation.

****6. Farmer Summary:**** This batch of BD39 rice has a mix of healthy and defective grains. While the overall health percentage is good, some defects require processing or removal before sale. With proper storage and handling, this batch can still yield a decent income for farmers in Karnataka.

IoT Sensor Data

Location: Karnataka
Grain Count: 8
Healthy %: 75%
Dominant Type: BD39
Avg Type Confidence: 94.4%
Avg Health Confidence: 52.3%
