

Rice Quality Analysis Report

Generated: 25/4/2026, 7:25:37 am

Job Details

Job ID: 32a10061-bd7f-4f0e-bce3-5885c4d01aaf
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:25:09 am

Analysis Summary

Rice Type: BD39
Total Grains: 12
Healthy Grains: 9
Unhealthy Grains: 3
Health Score: 75%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: ₹15,010 / 1000 kg
Shelf Life: 24 days (process within weeks — ICAR-NRRI high-risk grade)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:

- broken high: 1 grains (8%)
- discoloured high: 2 grains (17%)
- insect infected: 1 grains (8%)
- unhulled: 8 grains (67%)

Healthy 75% — 75%
Unhealthy 25% — 25%

Health Distribution

broken high (8%) — 8%
discoloured high (17%) — 17%
insect infected (8%) — 8%
unhulled (67%) — 67%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers to the questions:

****1. Quality Assessment:**** The health distribution breakdown indicates that this batch of BD39 rice from Karnataka contains:

- * Unhulled grains: 8 grains (67%)

- * Discoloured high grains: 2 grains (17%)

- * Insect infected grains: 1 grain (8%)

- * Broken high grains: 1 grain (8%)

This batch has a significant percentage of unhulled grains, which can affect the rice's appearance and marketability. The presence of discoloured high grains may also impact the rice's overall quality and appeal to consumers.

****2. Supply Chain:**** Given the health distribution, this batch belongs in the recommended supply chain "Rice Processing Industry (milling/parboiling)" because it requires processing to remove impurities and improve its quality for human consumption. The milling or parboiling process can help address issues like unhulled grains, discoloured high grains, and insect infected grains.

****3. Shelf Life:**** The estimated shelf life of 24 days is based on the presence of defects like broken high grains and insect infected grains, which can compromise the rice's quality and shelf life. According to ICAR-NRRI high-risk grade standards, this batch should be processed within weeks to minimize spoilage.

****4. Market Price Justification:****

The market price of Rs.15.01/kg is justified because this batch requires processing to improve its quality, which adds value to the rice. The price reflects the costs associated with processing and the batch's lower quality compared to other batches without these defects.

****5. Storage Instructions:****

- * Store the rice in a cool, dry place to minimize moisture absorption and prevent insect infestation.
- * Use airtight containers or bags to maintain grain integrity and keep impurities out.
- * Regularly inspect the rice for signs of spoilage or pest infestation.
- * Keep the rice away from direct sunlight and heat sources.

****6. Farmer Summary:**** This batch of BD39 rice contains some imperfections, including unhulled grains, discoloured high grains, and insect infected grains. Processing this rice can improve its quality and marketability, making it more valuable at Rs.15.01/kg.

IoT Sensor Data

Location: Karnataka
Grain Count: 12
Healthy %: 75%
Dominant Type: BD39
Avg Type Confidence: 99.6%
Avg Health Confidence: 57.7%
