

Rice Quality Analysis Report

Generated: 25/4/2026, 10:04:39 am

Job Details

Job ID: 4550e5e8-8140-4cd7-8943-08721384e52d
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 10:01:05 am

Analysis Summary

Rice Type: BD39
Total Grains: 11
Healthy Grains: 6
Unhealthy Grains: 5
Health Score: 55%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: ₹19,220 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:
• discoloured high: 5 grains (45%)
• unhulled: 6 grains (55%)

Quality Charts

Health Score

Healthy (55%) — 55%
Unhealthy (45%) — 45%

Grain Health

Healthy 55% — 55%
Unhealthy 45% — 45%

Health Distribution

discoloured high (45%) — 45%
unhulled (55%) — 55%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

****1. Quality Assessment:**** This batch has a health distribution breakdown of "unhulled: 6 grains (55%), discoloured high: 5 grains (45%)". This indicates

that out of the 11 grains analyzed, 6 are unhulled and 5 are discoloured high. The presence of discoloured high grains suggests that this batch has some defects that may affect its appearance, quality, or shelf life.

****2. Supply Chain:**** Given the health percentage of 54.55% (which is below average), this batch belongs in the recommended supply chain "Rice Processing Industry (milling/parboiling)" to remove the unhulled and discoloured high grains, making it suitable for consumption.

****3. Shelf Life:**** The shelf life estimate is only 3 days because of the presence of discoloured high grains, which may spoil quickly if not processed immediately. FSSAI guidelines consider this batch unsafe for storage due to the defects found.

****4. Market Price Justification:**** This batch fetches Rs.19.22/kg in Karnataka because it has some defects that affect its quality and shelf life. The market price reflects the lower value of this batch, considering the processing required to make it suitable for consumption.

****5. Storage Instructions:****

* Store in a cool, dry place to slow down spoilage.

* Keep away from direct sunlight and moisture to prevent further degradation.

* Handle grains gently to avoid damaging or breaking them.
* Process as soon as possible to minimize quality loss.

****6. Farmer Summary:**** Out of 11 grains analyzed, 6 are unhulled and 5 have discoloration issues. This batch requires processing to remove defects and make it suitable for consumption. It's best to process this batch immediately to maintain its quality and shelf life.

IoT Sensor Data

Location: Karnataka
Grain Count: 11
Healthy %: 54.55%
Dominant Type: BD39
Avg Type Confidence: 95.1%
Avg Health Confidence: 40.2%
