

Rice Quality Analysis Report

Generated: 25/4/2026, 4:01:48 am

Job Details

Job ID: 576da303-17ee-42da-af53-503f3fb8da3b
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:01:34 am

Analysis Summary

Rice Type: BD39
Total Grains: 32
Healthy Grains: 2
Unhealthy Grains: 30
Health Score: 6%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,880 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- discoloured high: 3 grains (9%)
- healthy large: 2 grains (6%)
- unhulled: 27 grains (84%)

Quality Charts

Health Score

Healthy (6%) — 6%
Unhealthy (94%) — 94%

Grain Health

Healthy 6% — 6%
Unhealthy 94% — 94%

Health Distribution

discoloured high (9%) — 9%
healthy large (6%) — 6%
unhulled (84%) — 85%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the assessments and recommendations:

****1. Quality Assessment:**** The health distribution breakdown

indicates that 84% of the grains (27 out of 32) are unhulled, which is not suitable for human consumption. Additionally, there are 3 discoloured high grains, which may affect the grain's appearance and quality. This batch has a relatively low percentage of healthy grains at only 6.25%.

****2. Supply Chain:**** Given the high percentage of unhealthy grains (84%), this batch belongs in the recommended supply chain for Animal Feed / Waste Management. The unhulled and discoloured high defects make it unsuitable for human consumption, and its quality is not sufficient to meet the standards of food-grade rice.

****3. Shelf Life:**** Due to the presence of unhulled and discoloured high grains, this batch has a shelf life estimate of only 3 days, making immediate processing required (FSSAI unsafe for storage). This highlights the urgency in handling and processing this batch to prevent further spoilage or contamination.

****4. Market Price Justification:**** The market price per kg in INR (8.88) is justified given the quality issues with this batch. The unhulled and discoloured high grains significantly reduce its value, making it suitable only for industrial uses like animal feed.

****5. Storage Instructions:****

* Store the batch in a secure

location to prevent contamination or spoilage.

* Handle the batch gently to avoid further damage to the unhulled grains.

* Ensure proper disposal of the discoloured high grains to maintain cleanliness and hygiene.

* Prevent moisture exposure to minimize further spoilage.

****6. Farmer Summary:**** This batch has significant quality issues, with most grains being unhulled or discoloured high. As a result, it's best suited for industrial uses like animal feed, rather than human consumption. Immediate processing is required to prevent further spoilage.
