Job Details

Job ID: 5cdbf4e7-72cd-409f-bbcb-aceee4b28f8c
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:52:59 am

Analysis Summary

Rice Type: BD39
Total Grains: 11
Healthy Grains: 0
Unhealthy Grains: 11
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- discoloured high: 2 grains (18%)
- unhulled: 9 grains (82%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

discoloured high (18%) — 18%
unhulled (82%) — 82%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are my assessments and recommendations:

****Quality Assessment:**** The health distribution for this batch indicates that all 11 grains are unhealthy, with 9 grains (82%)

being unhulled and 2 grains (18%) being discoloured high. This suggests a significant quality issue in this batch of BD39 rice from Karnataka.

****Supply Chain:**** Given the low health percentage (0.0%), it is recommended to dispose of this batch through Animal Feed/ Waste Management, as it is not suitable for human consumption or storage.

****Shelf Life:**** The estimated shelf life is 3 days, with immediate processing required due to the FSSAI guidelines. This is because unhulled and discoloured high grains are defective and can spoil quickly, making them unsuitable for storage.

****Market Price Justification:**** The market price of Rs.8.74/kg in Karnataka reflects the low quality of this batch. Buyers may be willing to pay a lower price due to the defects, which affects the grain's value and utility.

****Storage Instructions:****

1. Avoid storing this batch, as the unhulled grains can absorb moisture and cause further spoilage.
2. The discoloured high grains are likely damaged, which can lead to contamination of other stored grains.
3. Do not store this batch in a humid environment, as it can accelerate spoilage.
4. Consider processing this batch immediately to minimize losses.

****Farmer Summary:**** This batch of BD39 rice from Karnataka contains 11 unhealthy grains, with most being unhulled and some having discoloured high defects. The quality is so poor that it's not suitable for human consumption or storage, making it best suited for Animal Feed/Waste Management.

IoT Sensor Data

Location: Karnataka
Grain Count: 11
Healthy %: 0%
Dominant Type: BD39
Avg Type Confidence: 93.6%
Avg Health Confidence: 62.3%
