Job Details

Job ID: 5db99a73-d5ee-4409-91cb-a53b4c137955
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:25:47 am

Analysis Summary

Rice Type: BD39
Total Grains: 8
Healthy Grains: 0
Unhealthy Grains: 8
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 1 grains (13%)
- discoloured high: 1 grains (13%)
- insect infected: 1 grains (13%)
- unhulled: 5 grains (63%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (13%) — 13%
discoloured high (13%) — 13%
insect infected (13%) — 13%
unhulled (63%) — 62%

AI Storage & Handling Advice (LangChain / Ollama)

Here are the answers:

1. Quality Assessment:
This batch of BD39 rice from

Karnataka has a health distribution of unhulled: 5 grains (62%), insect infected: 1 grain (12%), broken high: 1 grain (12%), and discoloured high: 1 grain (12%). This indicates that most grains are unhulled, which may affect their quality. The presence of insect-infected, broken, and discoloured high grains further reduces the batch's overall quality.

2. Supply Chain:

Given the health distribution, this batch belongs in the recommended supply chain for Animal Feed / Waste Management due to its low quality. The unhulled and insect-infected grains may not be suitable for human consumption, while the broken and discoloured high grains are likely to be of poor nutritional value or have contaminants that make them unsuitable for food use.

3. Shelf Life:

The shelf life estimate of 3 days with immediate processing required is due to the presence of unhulled grains, which may attract pests or cause spoilage. The insect-infected and broken grains may also contribute to a shorter shelf life. Processing these grains as soon as possible is essential to prevent further degradation.

4. Market Price Justification:

The market price of Rs.8.74/kg in Karnataka for this batch is likely due to its low quality, which reduces its value for human consumption. The

unhulled and insect-infected grains may be more suitable for animal feed or other non-food uses, which can affect the market price.

5. Storage Instructions:

- Store the grains in a secure location to prevent pest infestation.
- Keep the grains away from moisture to prevent spoilage.
- Process the grains as soon as possible to minimize further degradation.
- Consider using containers with tight-fitting lids or sealed bags to store the grains.

6. Farmer Summary:

This batch of BD39 rice has some issues, including unhulled and insect-infected grains. We recommend processing these grains quickly for animal feed or other non-food uses, given their low quality. The shelf life is short due to the presence of these defects.

IoT Sensor Data

Location: Karnataka
Grain Count: 8
Healthy %: 0%
Dominant Type: BD39
Avg Type Confidence: 94.6%
Avg Health Confidence: 49.6%
