

Rice Quality Analysis Report

Generated: 25/4/2026, 8:49:29 am

Job Details

Job ID: 6b4cd005-3d7f-4b75-8ef7-c392e1f47450
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 8:48:54 am

Analysis Summary

Rice Type: BD39
Total Grains: 32
Healthy Grains: 29
Unhealthy Grains: 3
Health Score: 91%
Quality Grade: Premium Export Market
Market Price: 180,740 / 1000 kg
Shelf Life: 4.6 months (optimal hermetic/cold storage — FSSAI Grade A)
Supply Chain: Premium Export Market
Health Breakdown:

- discoloured high: 3 grains (9%)
- healthy large: 2 grains (6%)
- unhulled: 27 grains (84%)

Quality Charts

Health Score

Healthy (91%) — 91%
Unhealthy (9%) — 9%

Grain Health

Healthy 91% — 91%
Unhealthy 9% — 9%

Health Distribution

discoloured high (9%) — 9%
healthy large (6%) — 6%
unhulled (84%) — 85%

AI Storage & Handling Advice (LangChain / Ollama)

Here are the answers based strictly on the provided data:

****1. Quality Assessment:**** The health distribution breakdown indicates that this batch has 27

unhulled grains (84%), which is a significant proportion of the total. This suggests that the majority of grains in this batch have a natural covering, which may not be suitable for all types of processing or consumption. Additionally, there are 3 discoloured high grains (9%) which could affect their appearance and quality.

****2. Supply Chain:**** Given the health percentage is 90.62%, this batch belongs to the Premium Export Market supply chain due to its relatively high-quality status.

****3. Shelf Life:**** The shelf life estimate of 4.6 months in optimal hermetic/cold storage (FSSAI Grade A) is justified by the presence of unhulled grains, which are more susceptible to moisture and pest damage if not stored properly. This highlights the importance of proper storage conditions for maintaining grain quality.

****4. Market Price Justification:**** The market price per kg of Rs.80.74 in Karnataka is justified by the batch's relatively high health percentage (90.62%) and its suitability for premium export markets.

****5. Storage Instructions:****

* Store grains in a cool, dry place to minimize moisture damage.

* Keep the storage area clean and free of pests to prevent contamination.

* Monitor the storage conditions regularly to ensure optimal preservation.

* Consider using hermetic containers or FSSAI Grade A-approved packaging materials for long-term storage.

****6. Farmer Summary:**** This batch has 29 healthy grains, which is a good indication of overall quality. The presence of unhulled and discoloured high grains suggests some variability in grain quality, but the majority of grains are still suitable for premium export markets. Overall, this batch has potential for both domestic and international markets.

IoT Sensor Data

Location: Karnataka
Grain Count: 32
Healthy %: 90.62%
Dominant Type: BD39
Avg Type Confidence: 88.1%
Avg Health Confidence: 56.8%
