

Rice Quality Analysis Report

Generated: 25/4/2026, 4:29:01 am

Job Details

Job ID: 6c754509-c46f-4dc7-97a6-50e5e56b6b3d
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:28:48 am

Analysis Summary

Rice Type: BD39
Total Grains: 11
Healthy Grains: 0
Unhealthy Grains: 11
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- discoloured high: 4 grains (36%)
- unhulled: 7 grains (64%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

discoloured high (36%) — 36%
unhulled (64%) — 64%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers to the requested questions:

1. Quality Assessment:
The health distribution breakdown indicates that this batch of rice is predominantly

"unhulled" (64%) with a smaller portion being "discoloured high" (36%). This suggests that the grains may not meet the expected quality standards for human consumption, potentially due to processing or handling issues.

2. Supply Chain:

Given the low health percentage and the presence of defects like discolouration, this batch is best suited for the recommended supply chain: Animal Feed / Waste Management. The defects render the rice unsuitable for human consumption or storage, making it more valuable as a feedstock or for waste management purposes.

3. Shelf Life:

The shelf life estimate of "3 days" with an FSSAI unsafe designation indicates that this batch is highly perishable and requires immediate processing to avoid spoilage. The presence of defects like discolouration may further reduce the shelf life, making it essential to process the rice quickly to prevent any potential health risks.

4. Market Price Justification:

The market price of Rs.8.74/kg in Karnataka is likely due to the batch's limited suitability for human consumption and its necessity for alternative uses like animal feed or waste management. The price reflects the reduced value of this batch compared to higher-quality rice varieties, which could command

a premium.

5. Storage Instructions:

- * Store immediately in a cool, dry place to minimize spoilage.
- * Avoid storing in open containers to prevent contamination.
- * Keep away from direct sunlight and heat sources to reduce discolouration.
- * Label the storage container with cautionary warnings due to potential defects.

6. Farmer Summary:

This batch of rice has 11 grains, mostly "unhulled" (64%) with some "discoloured high" defects. The quality issues make it unsuitable for human consumption or storage, but suitable for alternative uses like animal feed or waste management.

IoT Sensor Data

Location: Karnataka
Grain Count: 11
Healthy %: 0%
Dominant Type: BD39
Avg Type Confidence: 94.4%
Avg Health Confidence: 40.1%
