Job Details

Job ID: 737a4b79-5da3-43f4-9091-fbb35f80e768
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:52:56 am

Analysis Summary

Rice Type: BD39
Total Grains: 6
Healthy Grains: 3
Unhealthy Grains: 3
Health Score: 50%
Quality Grade: Animal Feed / Waste Management
Market Price: 10 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 1 grains (17%)
- discoloured high: 2 grains (33%)
- unhulled: 3 grains (50%)

Quality Charts

Health Score

Healthy (50%) — 50%
Unhealthy (50%) — 50%

Grain Health

Healthy 50% — 50%
Unhealthy 50% — 50%

Health Distribution

broken high (17%) — 17%
discoloured high (33%) — 33%
unhulled (50%) — 50%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are my responses:

1. Quality Assessment:
The health distribution breakdown indicates that this

batch has 50% unhulled grains (out of a total of 6 grains), which may affect its quality and marketability. Additionally, 33% of the grains are discoloured high, which could further impact the rice's appearance and shelf life.

2. Supply Chain:

Given the health percentage of 50%, this batch belongs in the recommended supply chain for Animal Feed or Waste Management due to its compromised quality. Its presence in human consumption would be undesirable, considering the high percentage of defects and the immediate processing requirement (FSSAI unsafe for storage).

3. Shelf Life:

The shelf life estimate is "3 days" due to the presence of discoloured high grains, which can quickly degrade or spoil when exposed to air, light, or moisture. This highlights the need for immediate processing to prevent further deterioration.

4. Market Price Justification:

This batch fetches Rs.0.0/kg in Karnataka because it is not suitable for human consumption due to its compromised quality. The FSSAI considers this batch unsafe for storage, making it less desirable and therefore commanding a zero market price.

5. Storage Instructions:

To minimize further degradation:

* Store the grains in an airtight container to prevent moisture and air exposure.

* Keep them in a cool, dark place to slow down spoilage.

* Process or dispose of the grains within 3 days to prevent any potential contamination or spoilage.

* Avoid storing the grains for long periods, as their condition is already compromised.

6. Farmer Summary:

This batch has a total of 6 grains, with 3 grains being unhulled and another 2 grains discoloured high. With an overall health percentage of 50%, it's not suitable for human consumption, making it more valuable in the animal feed or waste management supply chain.

IoT Sensor Data

Location: Karnataka

Grain Count: 6

Healthy %: 50%

Dominant Type: BD39

Avg Type Confidence: 94.5%

Avg Health Confidence: 53.6%
