

Rice Quality Analysis Report

Generated: 25/4/2026, 3:58:46 am

Job Details

Job ID: 7ec734e4-e0e1-45bd-a6f1-a3df8a8f3785
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:58:35 am

Analysis Summary

Rice Type: Ipsala
Total Grains: 7
Healthy Grains: 0
Unhealthy Grains: 7
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: ₹10,580 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 1 grains (14%)
- unhulled: 6 grains (86%)

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (14%) — 14%
unhulled (86%) — 86%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

1. Quality Assessment:
The health distribution breakdown indicates that all 7 grains detected are unhealthy, with 6 grains being unhulled

(86%) and 1 grain being broken high (14%). This means that the entire batch is of poor quality and not suitable for human consumption.

2. Supply Chain:

This batch belongs in the recommended supply chain for Animal Feed or Waste Management because it has a health percentage of 0%, indicating that all grains are unhealthy. The FSSAI guidelines suggest immediate processing or disposal, making animal feed or waste management the most suitable option.

3. Shelf Life:

The shelf life estimate is 3 days due to the presence of unhulled and broken high grains, which make the batch unsafe for storage according to FSSAI guidelines. Immediate processing or disposal is necessary to prevent further contamination or degradation.

4. Market Price Justification:

This batch fetches Rs.10.58/kg in Karnataka because it is intended for animal feed or waste management purposes, where quality standards are different from those for human consumption. The market price reflects the lower value of this batch compared to high-quality rice grains.

5. Storage Instructions:

- Store the batch in a secure location to prevent contamination and ensure immediate processing.

- Keep the batch away from direct sunlight and moisture to maintain its integrity.
- Handle the batch with care to avoid further damage or breakage.
- Dispose of any remaining grain material according to local regulations and guidelines.

6. Farmer Summary:
This batch of Ipsala rice from Karnataka has a poor quality due to high counts of unhulled (86%) and broken high (14%) grains, making it unsuitable for human consumption. Immediate processing or disposal is necessary, and the farmer can consider selling this batch for animal feed or waste management purposes.
