Job Details

Job ID: 813d5a82-a21e-4fd4-9cec-070cb55d2f5a
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:50:32 am

Analysis Summary

Rice Type: BD39
Total Grains: 11
Healthy Grains: 9
Unhealthy Grains: 2
Health Score: 82%
Quality Grade: Local / Regional Retail Market
Market Price: ₹10 / 1000 kg
Shelf Life: 2.6 months (good storage conditions — FSSAI Grade B)
Supply Chain: Local / Regional Retail Market
Health Breakdown:

- discoloured high: 2 grains (18%)
- unhulled: 9 grains (82%)

Quality Charts

Health Score

Healthy (82%) — 82%
Unhealthy (18%) — 18%

Grain Health

Healthy 82% — 82%
Unhealthy 18% — 18%

Health Distribution

discoloured high (18%) — 18%
unhulled (82%) — 82%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are my responses:

****1. Quality Assessment:**** The health distribution breakdown for this batch of BD39 rice from Karnataka is "unhulled: 9 grains (82%), discoloured high: 2

grains (18%)". This indicates that most of the grains in this batch are unhulled, which may affect their appearance and texture. However, the presence of only 2 discoloured high grains suggests that the overall quality is still reasonable.

****2. Supply Chain:**** Given its health percentage of 81.82%, this batch belongs in the recommended supply chain for local/ regional retail markets. The unhulled grains may not be suitable for premium brands or long-distance transportation, but they can still find a market among customers who prioritize affordability and local support.

****3. Shelf Life:**** The estimated shelf life is 2.6 months under good storage conditions (FSSAI Grade B). This is reasonable considering the presence of unhulled grains, which may be more susceptible to moisture and pests. Discoloured high grains are unlikely to affect shelf life significantly.

****4. Market Price Justification:**** The market price per kg in INR is Rs.0.0 because this batch has a mixed quality profile. While most grains are unhulled, which can lower their value, the discoloured high grains may also make them less desirable for some buyers. As a result, the price may not reflect the full value of the rice.

****5. Storage Instructions:****
- Store in well-ventilated areas to prevent moisture accumulation.

- Keep away from direct sunlight and heat sources.
- Use FSSAI Grade B storage facilities or equivalent to maintain good storage conditions.
- Monitor for any signs of pest infestation or contamination regularly.

****6. Farmer Summary:**** This batch of BD39 rice has 9 out of 11 grains that are unhulled, which affects its appearance and value. Additionally, there are 2 discoloured high grains present. Overall, this batch may not be suitable for premium markets but can still find a local or regional market at an affordable price.

IoT Sensor Data

Location: Karnataka
Grain Count: 11
Healthy %: 81.82%
Dominant Type: BD39
Avg Type Confidence: 93.0%
Avg Health Confidence: 62.6%
