

Rice Quality Analysis Report

Generated: 25/4/2026, 7:18:40 am

Job Details

Job ID: 8d71891f-ce03-4f84-8683-08875c33c705
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:18:04 am

Analysis Summary

Rice Type: BD39
Total Grains: 12
Healthy Grains: 9
Unhealthy Grains: 3
Health Score: 75%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: ₹15,010 / 1000 kg
Shelf Life: 24 days (process within weeks — ICAR-NRRI high-risk grade)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:

- broken high: 1 grains (8%)
- discoloured high: 2 grains (17%)
- insect infected: 1 grains (8%)
- unhulled: 8 grains (67%)

Quality Charts

Health Score

Healthy (75%) — 75%
Unhealthy (25%) — 25%

Grain Health

Healthy 75% — 75%
Unhealthy 25% — 25%

Health Distribution

broken high (8%) — 8%
discoloured high (17%) — 17%
insect infected (8%) — 8%
unhulled (67%) — 67%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers to the requested questions:

1. Quality Assessment:

The health distribution breakdown indicates that this batch of BD39 rice has:
'¢ , prains (67%) with unhulled defects
'¢ " prains (17%) with discoloured high defects
'¢ prain (8%) with insect-infected defects
'¢ prain (8%) with broken high defects

This suggests that the batch has a significant proportion of grains with minor to moderate quality issues, which may affect its appearance and edibility.

2. Supply Chain:

The recommended supply chain for this batch is the Rice Processing Industry (milling/parboiling) due to its exact health percentage of 75%. This indicates that the batch contains a mix of healthy and unhealthy grains, making it more suitable for processing rather than direct sale as high-quality rice.

3. Shelf Life:

The estimated shelf life of 24 days is attributed to the presence of defects such as insect-infected and broken high grains. These defects can lead to contamination or spoilage, reducing the shelf life of the batch.

4. Market Price Justification:

The market price per kg in INR (Rs.15.01) for this batch is justified due to its mixed quality and the need for processing. The price reflects the reduced

value of the batch compared to high-quality rice, but it still has some inherent value as a raw material for processing.

5. Storage Instructions:
Based on the defect types found, here are specific storage instructions:

- * Store in clean, dry containers to minimize contamination from insects or moisture.
- * Keep away from direct sunlight and heat sources to prevent further damage to the unhulled grains.
- * Avoid mixing with other rice batches to prevent cross-contamination.

6. Farmer Summary:
This batch of BD39 rice has 11 healthy grains out of a total of 12, which is not ideal. The presence of defects may reduce its market value, but it can still be processed into value-added products. As the farmer, you should consider your options for processing or selling this batch accordingly.

IoT Sensor Data

Location: Karnataka
Grain Count: 12
Healthy %: 75%
Dominant Type: BD39
Avg Type Confidence: 99.6%
Avg Health Confidence: 57.7%
