Job Details

Job ID: a4d7153f-e414-4918-99d0-04465aa2469f
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:19:29 am

Analysis Summary

Rice Type: BD39
Total Grains: 15
Healthy Grains: 0
Unhealthy Grains: 8
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 19.2/kg
Shelf Life: 3 days (immediate processing required)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 2 grains (13%)
- discoloured high: 5 grains (33%)
- insect infected: 2 grains (13%)
- unhulled: 6 grains (40%)

Quality Charts

Health Score

Unhealthy (8) — 8 (100%)

Grain Health

Unhealthy Grains — 8 (100%)

Health Distribution

broken high — 2 (13%)
discoloured high — 5 (33%)
insect infected — 2 (13%)
unhulled — 6 (40%)

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

****1. Quality Assessment:**** The

health distribution breakdown indicates that this batch of BD39 rice from Karnataka has a significant proportion of defective grains. Specifically:

- 6 grains (40%)
- 5 grains (33%)
- 2 grains (13%)
- 2 grains (13%)

This suggests that the batch has a relatively low quality, with a significant proportion of grains having visible defects. This may impact their suitability for human consumption and could affect their market value.

****2. Supply Chain:**** Given the health percentage of this batch ($8/15 = 0.53$ or 53%), it is recommended to divert this batch to the animal feed or waste management supply chain, as indicated in the data. The high proportion of defective grains makes it unsuitable for human consumption or traditional food processing.

****3. Shelf Life:**** The shelf life estimate of "3 days" (immediate processing required) suggests that the batch has a short shelf life due to the presence of insect-infected and broken grains, which can attract pests and reduce grain quality further. This highlights the need for prompt processing or utilization in animal feed or other non-food applications.

****4. Market Price Justification:**** The market price per kg of Rs. 9.2 is justified by the batch's low quality and suitability only

for animal feed or waste management purposes. The relatively high price reflects the costs associated with processing or utilizing these grains, which may not be economically viable for traditional food applications.

****5. Storage Instructions:****
'¢ 7F÷&R –â G y, well-ventilated area to prevent moisture accumulation.
'¢ void storing near sources of light, as this can attract pests.
'¢ Vç7W&R &VwVÆ " –ç7 V7F–öç2 Fò detect any signs of pest infestation or spoilage.
'¢ 6öç6–FW" W6–æ7 V6– Æ— ed storage containers or bags to prevent grain degradation.

****6. Farmer Summary:**** This batch of BD39 rice has a significant number of defective grains, making it unsuitable for human consumption. With 8 out of 15 grains showing defects, this batch is best suited for animal feed or waste management applications.
