

Rice Quality Analysis Report

Generated: 25/4/2026, 9:57:23 am

Job Details

Job ID: abe938e3-4a8f-4178-aa1d-04413ff2d8c6
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 9:56:50 am

Analysis Summary

Rice Type: BD39
Total Grains: 11
Healthy Grains: 6
Unhealthy Grains: 5
Health Score: 55%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: ₹10,400 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:

- discoloured high: 5 grains (45%)
- unhulled: 6 grains (55%)

Quality Charts

Health Score

Healthy (55%) — 55%
Unhealthy (45%) — 45%

Grain Health

Healthy 55% — 55%
Unhealthy 45% — 45%

Health Distribution

discoloured high (45%) — 45%
unhulled (55%) — 55%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers to each question:

1. Quality Assessment:
The health distribution breakdown indicates that this batch contains 6 grains that are

unhulled (55%) and 5 grains that are discoloured high (45%). This suggests a significant portion of the grains have defects, which may affect their quality and marketability.

2. Supply Chain:

This batch belongs in the recommended supply chain, "Rice Processing Industry (milling/parboiling)", due to its low health percentage of 54.55%. The presence of discoloured high grains indicates that they may not be suitable for direct human consumption or high-end markets, making processing and milling a more suitable option.

3. Shelf Life:

The shelf life estimate is "3 days (immediate processing required — FSSAI unsafe for storage)" due to the presence of unhulled and discoloured high grains. These defects can lead to spoilage and contamination, making it essential to process the rice immediately to ensure food safety and quality.

4. Market Price Justification:

This batch fetches Rs.10.4/kg in Karnataka because it has been classified as a lower-grade rice due to its health distribution. The discoloured high grains may not be suitable for high-end markets, but they can still be sold at a lower price point for industrial or processing purposes.

5. Storage Instructions:

Based on the defect types found, the following storage instructions are recommended:

- * Store in a cool, dry place to prevent moisture accumulation and spoilage.
- * Keep the rice away from direct sunlight to prevent further discoloration.
- * Avoid stacking the bags tightly to ensure good air circulation and prevent moisture buildup.
- * Process or consume the rice within 3 days to minimize quality degradation.

6. Farmer Summary:
This batch contains 11 grains, with 6 being unhulled (55%) and 5 being discoloured high (45%). The low health percentage indicates that this rice is best suited for processing or industrial use.

IoT Sensor Data

Location: Karnataka
Grain Count: 11
Healthy %: 54.55%
Dominant Type: BD39
Avg Type Confidence: 95.1%
Avg Health Confidence: 40.2%
