

Rice Quality Analysis Report

Generated: 25/4/2026, 4:28:04 am

Job Details

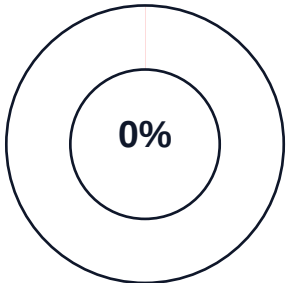

Job ID: af24523b-6f78-4b57-b2c5-afa5c5f5c631
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:27:52 am

Analysis Summary

Rice Type: BD39
Total Grains: 6
Healthy Grains: 0
Unhealthy Grains: 6
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

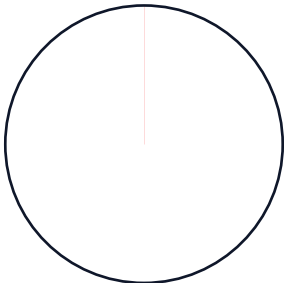

- discoloured high: 1 grains (17%)
- insect infected: 1 grains (17%)
- unhulled: 4 grains (67%)

Quality Charts

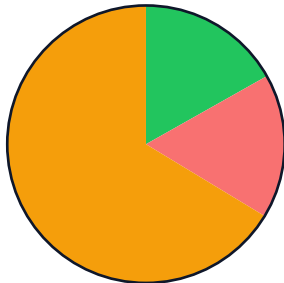

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

discoloured high (17%) — 17%
insect infected (17%) — 17%
unhulled (67%) — 66%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the assessments:

- Quality Assessment:
The health distribution breakdown indicates that this

batch of rice is largely affected by defects. Out of the total 6 grains detected, 4 grains (67%) are unhulled, which means they require further processing to be considered edible. Additionally, there is 1 grain (17%) with insect infection and another grain (17%) with discoloration. This suggests that the batch has significant quality issues, making it unsuitable for human consumption.

2. Supply Chain:

Given the high percentage of unhulled grains (67%), which are not fit for human consumption, this batch belongs in the recommended supply chain for Animal Feed or Waste Management. The other defects found also do not suggest a human food-grade product.

3. Shelf Life:

The shelf life estimate is 3 days with immediate processing required, as per FSSAI guidelines. This is because of the presence of unhulled grains and insect-infected grain, which can lead to spoilage or contamination if stored for an extended period. Processing these grains immediately will help prevent further degradation.

4. Market Price Justification:

The market price of Rs.8.74/kg in Karnataka reflects the low quality and limited usability of this batch. The high percentage of defects makes it unsuitable for human consumption, which justifies a lower market price.

compared to higher-quality rice varieties.

5. Storage Instructions:
Based on the defect types found:

- * Store unhulled grains separately to prevent contamination.
- * Keep insect-infected grain in sealed containers to prevent further infestation.
- * Avoid storing discoloured high grains as they may be spoiled or rotten, which can affect other stored grains.

6. Farmer Summary:
Out of 6 total grains detected, 4 were unhulled and not fit for human consumption. There was also 1 grain with insect infection and another with discoloration. This batch is better suited for Animal Feed or Waste Management, rather than human consumption.

IoT Sensor Data

Location: Karnataka
Grain Count: 6
Healthy %: 0%
Dominant Type: BD39
Avg Type Confidence: 91.9%
Avg Health Confidence: 39.4%
