

Rice Quality Analysis Report

Generated: 25/4/2026, 4:03:02 am

Job Details

Job ID: b12bfd63-f934-4d92-9712-0e8360a848b0
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:02:49 am

Analysis Summary

Rice Type: BD39
Total Grains: 32
Healthy Grains: 2
Unhealthy Grains: 30
Health Score: 6%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,880 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- discoloured high: 3 grains (9%)
- healthy large: 2 grains (6%)
- unhulled: 27 grains (84%)

Quality Charts

Health Score

Healthy (6%) — 6%
Unhealthy (94%) — 94%

Grain Health

Healthy 6% — 6%
Unhealthy 94% — 94%

Health Distribution

discoloured high (9%) — 9%
healthy large (6%) — 6%
unhulled (84%) — 85%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the requested assessments:

1. Quality Assessment:
The health distribution

breakdown indicates that this batch has an unacceptable percentage of unhealthy grains (93.75%). The specific labels and counts show unhulled grains (84%), discoloured high grains (9%), and only 6% healthy large grains. This suggests a significant quality issue, which may impact the rice's edibility, texture, and overall value.

2. Supply Chain:

Given the unacceptable health percentage of this batch, it is recommended to divert this supply into the Animal Feed / Waste Management stream, as stated in the data. The presence of unhulled and discoloured high grains indicates a lack of processing quality control, making this rice unsuitable for human consumption or further processing.

3. Shelf Life:

The estimated shelf life of 3 days is due to the presence of unhulled and discoloured high grains, which can attract pests and contaminants, compromising food safety and integrity. Immediate processing is necessary to avoid FSSAI non-compliance risks.

4. Market Price Justification:

The market price per kg in INR (Rs.8.88) reflects the batch's poor quality, making it less desirable for human consumption. The low price also takes into account the reduced shelf life and potential storage issues.

5. Storage Instructions:

- * Store the rice in airtight containers to prevent contamination.
- * Keep the area clean and dry to minimize pest attraction.
- * Avoid storing the rice for extended periods, as it may further deteriorate.

6. Farmer Summary:

This batch of BD39 rice from Karnataka has 93.75% unhealthy grains, mainly due to unhulled and discoloured high defects. The quality issues require immediate processing or diversion into animal feed/ waste management streams.

IoT Sensor Data

Location: Karnataka
Grain Count: 32
Healthy %: 6.25%
Dominant Type: BD39
Avg Type Confidence: 88.1%
Avg Health Confidence: 56.8%
