

Rice Quality Analysis Report

Generated: 25/4/2026, 4:21:47 am

Job Details

Job ID: c6ab9d65-4b4d-4501-bc50-9a58a3dbac20
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:21:31 am

Analysis Summary

Rice Type: Ipsala
Total Grains: 9
Healthy Grains: 0
Unhealthy Grains: 9
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: ₹10,580 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 5 grains (56%)
- insect infected: 2 grains (22%)
- unhulled: 2 grains (22%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (56%) — 56%
insect infected (22%) — 22%
unhulled (22%) — 22%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

1. Quality Assessment:
The health distribution breakdown indicates that this

batch of Ipsala rice from Karnataka has a significant proportion of defects.

Specifically:

• Unhulled: 2 grains (22%)

• Insect-infected: 2 grains (22%)

• Broken: 5 grains (56%)

This batch is predominantly composed of defective or low-quality grains, which may not meet the expected standards for human consumption.

2. Supply Chain:

Given the health distribution and the fact that this batch fetches Rs.10.58/kg in Karnataka, it belongs in the recommended supply chain for Animal Feed / Waste Management. The defects render this rice unsuitable for human consumption or storage, making it more valuable as animal feed or waste management material.

3. Shelf Life:

The shelf life estimate of 3 days (immediate processing required) is due to the presence of unhulled and insect-infected grains, which can contaminate other products or cause food safety concerns. FSSAI guidelines recommend immediate processing and handling to prevent any potential risks.

4. Market Price Justification:

The market price of Rs.10.58/kg in Karnataka is justified given the batch's defects. The presence of unhulled and insect-infected grains reduces its value for human

consumption, making it more suitable for alternative uses like animal feed or waste management.

5. Storage Instructions:
Based on the defect types found, here are specific storage instructions:

- * Store immediately to prevent contamination and potential food safety risks.
- * Handle with caution to avoid spreading defects to other products.
- * Consider processing and handling in a controlled environment to minimize risks.
- * Do not store for extended periods, as this batch has a short shelf life.

6. Farmer Summary:
For the Ipsala rice from Karnataka, this batch contains a high proportion of defective grains, making it more valuable for animal feed or waste management. The farmer should prioritize immediate processing and handling to ensure food safety and minimize losses.

IoT Sensor Data

Location: Karnataka
Grain Count: 9
Healthy %: 0%
Dominant Type: Ipsala
Avg Type Confidence: 85.6%
Avg Health Confidence: 49.8%
