Job Details

Job ID: c9a113be-6a77-47e3-827c-c8b1c3750b73
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 7:19:04 am

Analysis Summary

Rice Type: BD39
Total Grains: 12
Healthy Grains: 9
Unhealthy Grains: 3
Health Score: 75%
Quality Grade: Rice Processing Industry (milling/parboiling)
Market Price: ₹15,010 / 1000 kg
Shelf Life: 24 days (process within weeks — ICAR-NRRI high-risk grade)
Supply Chain: Rice Processing Industry (milling/parboiling)
Health Breakdown:

- broken high: 1 grains (8%)
- discoloured high: 2 grains (17%)
- insect infected: 1 grains (8%)
- unhulled: 8 grains (67%)

Quality Charts

Health Score

Healthy (75%) — 75%
Unhealthy (25%) — 25%

Grain Health

Healthy 75% — 75%
Unhealthy 25% — 25%

Health Distribution

broken high (8%) — 8%
discoloured high (17%) — 17%
insect infected (8%) — 8%
unhulled (67%) — 67%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the assessments:

1. Quality Assessment:

This batch of BD39 rice from Karnataka has a health distribution that indicates 8 grains (67%) are unhulled, 2 grains (17%) are discoloured high, 1 grain (8%) is insect infected, and 1 grain (8%) is broken high. This means the majority of the grains have some level of defects, which may affect their quality and market value.

2. Supply Chain:

The recommended supply chain for this batch is the Rice Processing Industry (milling/parboiling) because its health percentage is relatively low at 75%. The presence of defective grains like discoloured high and insect infected suggests that further processing or refining might be necessary to make them suitable for human consumption.

3. Shelf Life:

The estimated shelf life of this batch is 24 days, which is considered relatively short due to the presence of defects like insect infection. This is because insects can contaminate other grains in the batch, reducing their quality and increasing the risk of spoilage.

4. Market Price Justification:

This batch fetches Rs.15.01/kg in Karnataka because it has a low health percentage (75%) and is therefore considered lower-grade rice. The market price reflects this reduced value due to the presence of defective grains.

5. Storage Instructions:

- Store in well-ventilated areas to minimize moisture accumulation.
- Keep away from direct sunlight to prevent further discoloration.
- Regularly inspect for signs of insect infestation or contamination.
- Handle carefully to avoid damaging any broken grains.

6. Farmer Summary:

This batch of BD39 rice has some defects, but it's still a decent product with 75% health percentage. The unhulled and discoloured high grains can be processed further to improve their quality, while the insect-infected grain should be removed to prevent contamination.

IoT Sensor Data

Location: Karnataka
Grain Count: 12
Healthy %: 75%
Dominant Type: BD39
Avg Type Confidence: 99.6%
Avg Health Confidence: 57.7%
