

Rice Quality Analysis Report

Generated: 25/4/2026, 4:25:08 am

Job Details

Job ID: cdaa4000-9558-4580-8d74-396ce257e319
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:24:56 am

Analysis Summary

Rice Type: BD39
Total Grains: 6
Healthy Grains: 0
Unhealthy Grains: 6
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 1 grains (17%)
- discoloured high: 2 grains (33%)
- unhulled: 3 grains (50%)

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (17%) — 17%
discoloured high (33%) — 33%
unhulled (50%) — 50%

AI Storage & Handling Advice (LangChain / Ollama)

Here are the answers to your questions based on the provided data:

****1. Quality Assessment:**** The health distribution for this batch

of BD39 rice from Karnataka indicates that all 6 grains detected are unhealthy, with a breakdown of:

- 3 grains (50%)
- 2 grains (33%)
- 1 grain (17%)

This suggests that the quality of this batch is severely compromised due to defects in processing, storage, or transportation.

****2. Supply Chain:**** The recommended supply chain for this batch is Animal Feed/Waste Management because all 6 grains are unhealthy and not fit for human consumption. The health percentage is 0%, indicating that none of the grains meet food-grade standards.

****3. Shelf Life:**** The estimated shelf life of 3 days with immediate processing required (FSSAI unsafe for storage) suggests that the defective rice is perishable and should be processed or disposed of promptly to prevent further deterioration.

****4. Market Price Justification:**** The market price per kg in INR, Rs.8.74, can be justified because this batch is considered unfit for human consumption due to its poor quality. Animal feed or waste management applications may value the rice based on its protein content and other nutritional properties.

****5. Storage Instructions:****

'Ç 7F÷&R –ÖÖVF– FVÇ' –â 6V7W&R location to prevent further contamination.

'Ç Fò æ÷B 7F÷&R v—F, `ood-grade rice to avoid cross-contamination.

'Ç °eep away from direct sunlight, heat sources, and moisture.

'Ç 6öç6–FW" 6Vpregating the defective rice from other batches to prevent mixing with healthy grains.

****6. Farmer Summary:**** This batch of BD39 rice is severely defective and should be processed or disposed of promptly. Only 4 out of 6 grains were of the BD39 variety, while 2 were Ipsala type.
