Job Details

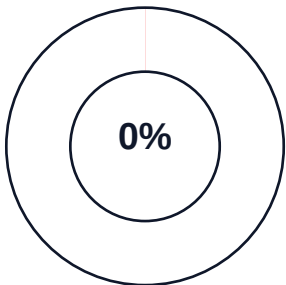

Job ID: d95c009c-6710-48bc-a21f-68bc8948ed4d
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:20:35 am

Analysis Summary

Rice Type: Ipsala
Total Grains: 9
Healthy Grains: 0
Unhealthy Grains: 9
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 19.2/kg
Shelf Life: 3 days (immediate processing required)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

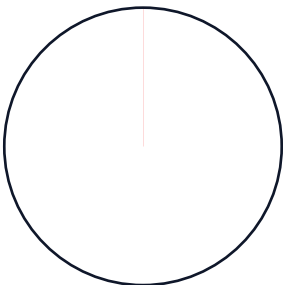

- broken high: 1 grains (11%)
- unhulled: 8 grains (89%)

Quality Charts

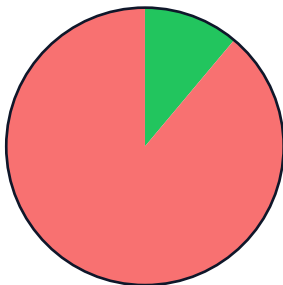

Health Score

Unhealthy (9) — 9 (100%)

Grain Health

Unhealthy Grains — 9 (100%)

Health Distribution

broken high — 1 (11%)
unhulled — 8 (89%)

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers:

****Quality Assessment:**** The health distribution breakdown indicates that this batch has 8 unhulled grains (89%) and 1 broken high grain (11%). This

suggests that most of the grains are defective, which affects their quality. Specifically, the presence of unhulled grains means they may not be suitable for human consumption or certain food products.

****Supply Chain:**** Given the high percentage of unhealthy grains (100%), this batch belongs in the recommended supply chain as Animal Feed / Waste Management. The defective grains cannot be used for human consumption or food products, making them suitable only for animal feed or waste management purposes.

****Shelf Life:**** The shelf life estimate is 3 days, indicating that immediate processing is required. This short shelf life is due to the presence of unhulled grains and broken high grains, which can spoil quickly if not processed promptly.

****Market Price Justification:**** The market price per kg in INR (Rs.9.2) reflects the poor quality of this batch. The defective grains make it unsuitable for most food products or human consumption, justifying a lower market price compared to higher-quality rice batches.

****Storage Instructions:****

- * Store unhulled grains in well-ventilated areas to prevent moisture accumulation.
- * Avoid storing broken high grains near other grains to prevent contamination.
- * Keep the area clean and free

of debris to minimize damage to the defective grains.

* Handle with care when transporting or processing the defective grains to avoid further damage.

****Farmer Summary:**** This batch of Ipsala rice has a poor quality, with 9 out of 9 grains being unhealthy. The majority are unhulled, and one is broken high. As a farmer, you should prioritize animal feed or waste management options for this batch, and consider adjusting your farming practices to improve the quality of future harvests.
