

Rice Quality Analysis Report

Generated: 25/4/2026, 3:38:33 am

Job Details

Job ID: e355db23-8dc7-4aee-bc4f-d767dce51e63
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:38:18 am

Analysis Summary

Rice Type: BD39
Total Grains: 6
Healthy Grains: 0
Unhealthy Grains: 5
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 18,740 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- discoloured high: 1 grains (17%)
- insect infected: 1 grains (17%)
- unhulled: 4 grains (67%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

discoloured high (17%) — 17%
insect infected (17%) — 17%
unhulled (67%) — 66%

AI Storage & Handling Advice (LangChain / Ollama)

Here are the assessments and recommendations based on the provided data:

****Quality Assessment:****
The health distribution for this

batch of BD39 rice from
Karnataka is concerning, with:

- * Unhulled grains: 4 (67%)
- * Insect infected grains: 1 (17%)
- * Discoloured high grains: 1 (17%)

This suggests that nearly two-thirds of the grains have poor quality due to unhulling, and one-seventh are either insect-infected or discoloured. These defects can impact grain usability and market value.

****Supply Chain:****

Given the high percentage of unhealthy grains (67%), this batch is best suited for the recommended supply chain: Animal Feed / Waste Management. The presence of unhulled grains and insect-infected grains makes it unsuitable for human consumption or storage, emphasizing the need for immediate processing and utilization in animal feed.

****Shelf Life:****

The estimated shelf life of 3 days with an FSSAI unsafe storage warning highlights the urgency to process this batch immediately due to the presence of unhulled and insect-infected grains. Unhulled grains can attract pests, while insect-infected grains can cause contamination, making it essential to utilize the batch promptly.

****Market Price Justification:****

The market price per kg (Rs.8.74) reflects the compromised quality of this

batch, as unhealthy grains tend to fetch lower prices due to reduced demand and potential damage caused by pests or mould growth.

****Storage Instructions:****

1. ****Immediately process****: To prevent further contamination or pest infestation.
2. ****No storage****: Do not store this batch, as it is considered unsafe for long-term preservation.
3. ****Utilize promptly****: Process the grains quickly to minimize any potential damage.
4. ****Designate a specific area****: Store the processed grains in a designated area, away from other healthy grain stock.

****Farmer Summary:****

For this batch of BD39 rice from Karnataka, nearly two-thirds of the grains have poor quality due to unhulling and insect infestation. This emphasizes the need for immediate processing and utilization in animal feed or waste management.
