

Rice Quality Analysis Report

Generated: 25/4/2026, 3:55:55 am

Job Details

Job ID: edc37635-bde1-44f3-b5c8-0ea57640c0ef
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 3:55:42 am

Analysis Summary

Rice Type: Ipsala
Total Grains: 9
Healthy Grains: 0
Unhealthy Grains: 9
Health Score: 0%
Quality Grade: Animal Feed / Waste Management
Market Price: 110,580 / 1000 kg
Shelf Life: 3 days (immediate processing required — FSSAI unsafe for storage)
Supply Chain: Animal Feed / Waste Management
Health Breakdown:

- broken high: 2 grains (22%)
- insect infected: 1 grains (11%)
- unhulled: 6 grains (67%)

Quality Charts

Health Score

Unhealthy (100%) — 100%

Grain Health

Unhealthy 100% — 100%

Health Distribution

broken high (22%) — 22%
insect infected (11%) — 11%
unhulled (67%) — 67%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are the answers to the questions:

1. Quality Assessment:
The health distribution

breakdown indicates that this batch of Ipsala rice from Karnataka has the following defects:

• Unhulled grains: 6 grains (67%)

• Broken grains: 2 grains (22%)

• Insect infestation: 1 grain (11%)

This suggests a low quality batch with a significant number of unhulled and broken grains, as well as insect infestation. These defects can affect the rice's appearance, texture, and nutritional value.

2. Supply Chain:

Given the health percentage of 0.0% (unhealthy), this batch belongs in the recommended supply chain for Animal Feed / Waste Management. The high number of unhulled and broken grains, as well as insect infestation, makes it unsuitable for human consumption or food processing.

3. Shelf Life:

The shelf life estimate is only 3 days due to the presence of insect-infected grains. FSSAI guidelines consider this batch unsafe for storage, emphasizing the need for immediate processing to prevent further contamination and potential health risks.

4. Market Price Justification:

The market price per kg in INR (Rs.10.58) reflects the lower quality and higher risk associated with this batch. The price takes into account the defects found, which reduce its value as a food-grade product. This justifies the lower price

point for this batch compared to high-quality rice varieties.

5. Storage Instructions:

To prevent further contamination and maintain safety:

- * Store in sealed containers or bins with tight-fitting lids.
- * Keep away from direct sunlight and heat sources.
- * Regularly inspect the grain for signs of insect infestation, mold, or moisture.
- * Process immediately to minimize the risk of contamination spreading.

6. Farmer Summary:

This batch of Ipsala rice from Karnataka has a significant number of unhulled and broken grains, as well as insect infestation. It's essential to prioritize immediate processing to ensure food safety, and consider alternative supply chains like animal feed or waste management. With proper handling and storage, the farmer can minimize losses and optimize the value of this batch.

IoT Sensor Data

Location: Karnataka
Grain Count: 9
Healthy %: 0%
Dominant Type: Ipsala
Avg Type Confidence: 83.1%
Avg Health Confidence: 59.7%
