

Rice Quality Analysis Report

Generated: 25/4/2026, 8:50:32 am

Job Details

Job ID: efb39102-8dc1-449c-b0f3-0449bc6dd94b
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 8:50:00 am

Analysis Summary

Rice Type: BD39
Total Grains: 32
Healthy Grains: 29
Unhealthy Grains: 3
Health Score: 91%
Quality Grade: Premium Export Market
Market Price: 182,810 / 1000 kg
Shelf Life: 4.6 months (optimal hermetic/cold storage — FSSAI Grade A)
Supply Chain: Premium Export Market
Health Breakdown:

- discoloured high: 3 grains (9%)
- healthy large: 2 grains (6%)
- unhulled: 27 grains (84%)

Quality Charts

Health Score

Healthy (91%) — 91%
Unhealthy (9%) — 9%

Grain Health

Healthy 91% — 91%
Unhealthy 9% — 9%

Health Distribution

discoloured high (9%) — 9%
healthy large (6%) — 6%
unhulled (84%) — 85%

AI Storage & Handling Advice (LangChain / Ollama)

Based strictly on the provided data, here are the assessments and recommendations:

****Quality Assessment:****
The health distribution

breakdown indicates that 84% of grains (27 out of 32) are unhulled, which is a common characteristic of this rice type. The remaining 16% (5 grains) have either healthy large or discoloured high defects. This batch's overall health percentage is 90.62%, suggesting a generally good quality.

****Supply Chain:****

Given the high proportion of unhulled grains and relatively low incidence of defects, this batch belongs in the Premium Export Market supply chain. The premium market typically demands higher-quality rice with minimal defects, making this batch suitable for export.

****Shelf Life:****

The shelf life estimate is based on optimal hermetic/cold storage (FSSAI Grade A) conditions. Given the presence of unhulled grains and a small number of defective grains, it's essential to maintain proper storage conditions to prevent further degradation or contamination. This will help extend the shelf life to approximately 4.6 months.

****Market Price Justification:****

The market price per kg (Rs.82.81) in Karnataka is justified due to the high percentage of unhulled grains and relatively good health profile, making this batch suitable for premium markets that demand higher-quality rice. The small number of defects also reduces the likelihood of

contamination or spoilage during storage and transportation.

****Storage Instructions:****

1. Store the rice in a cool, dry place with minimal temperature fluctuations.
2. Ensure proper hermetic sealing to prevent moisture entry and maintain optimal humidity levels.
3. Keep the rice away from direct sunlight and heat sources to prevent degradation.
4. Regularly inspect the rice for signs of spoilage or contamination.

****Farmer Summary:****

This batch has 29 healthy grains, with most being unhulled. The small number of defects won't significantly impact shelf life or marketability. With proper storage and handling, this rice can fetch a premium price in the export market.

IoT Sensor Data

Location: Karnataka
Grain Count: 32
Healthy %: 90.62%
Dominant Type: BD39
Avg Type Confidence: 88.1%
Avg Health Confidence: 56.8%
