

Rice Quality Analysis Report

Generated: 25/4/2026, 4:58:12 am

Job Details

Job ID: f0a716e0-dacf-4713-a9e6-d40c1b0bf819
Region: Karnataka
Status: COMPLETED
Request Type: predict
File Count: 1
Created At: 25/4/2026, 4:41:12 am

Analysis Summary

Rice Type: BD39
Total Grains: 32
Healthy Grains: 29
Unhealthy Grains: 3
Health Score: 91%
Quality Grade: Premium Export Market
Market Price: 135,790 / 1000 kg
Shelf Life: 4.6 months (optimal hermetic/cold storage — FSSAI Grade A)
Supply Chain: Premium Export Market
Health Breakdown:

- discoloured high: 3 grains (9%)
- healthy large: 2 grains (6%)
- unhulled: 27 grains (84%)

Quality Charts

Health Score

Healthy (91%) — 91%
Unhealthy (9%) — 9%

Grain Health

Healthy 91% — 91%
Unhealthy 9% — 9%

Health Distribution

discoloured high (9%) — 9%
healthy large (6%) — 6%
unhulled (84%) — 85%

AI Storage & Handling Advice (LangChain / Ollama)

Based on the provided data, here are my answers:

****1. Quality Assessment:**** The health distribution breakdown indicates that this batch has 27

grains (84%) labeled as "unhulled", which suggests that a significant portion of the grains have not been processed to remove their hulls. Additionally, there are 3 grains (9%) labeled as "discoloured high", which may indicate poor quality or defects in these specific grains.

****2. Supply Chain:**** The health percentage of 90.62% is relatively high, indicating that most grains in this batch are healthy. Given the premium export market recommendation, it's likely that this batch belongs in the supply chain due to its overall quality and minimal defect count (3 out of 32 grains). The unhulled grains may not be suitable for local consumption but could still be valuable in a niche export market.

****3. Shelf Life:**** The estimated shelf life is 4.6 months, which is relatively long considering the presence of "unhulled" grains. This suggests that proper storage conditions (hermetic/ cold storage) and handling can help maintain the quality and freshness of this batch for an extended period.

****4. Market Price Justification:**** The market price per kg in INR (Rs. 35.79) may be justified due to the relatively high health percentage, minimal defect count, and potential demand from niche export markets that value unhulled grains.

****5. Storage Instructions:****

- * Store the batch in hermetic containers to prevent moisture and pests from affecting the quality of unhulled grains.
- * Maintain a consistent cold temperature (around 15°C) to slow down any biological processes that might affect grain quality.
- * Regularly inspect the batch for signs of spoilage or infestation, as the presence of unhulled grains may make it more challenging to detect defects.
- * Avoid exposure to direct sunlight and heat sources to prevent damage to the unhulled grains.

****6. Farmer Summary:**** This batch has a good overall health percentage, with 29 out of 32 grains deemed healthy. The majority (84%) are unhulled, which may limit their use in local markets but could still be valuable in niche export markets. With proper storage and handling, this batch can maintain its quality for an extended period.

IoT Sensor Data

Location: Karnataka
Grain Count: 32
Healthy %: 90.62%
Dominant Type: BD39
Avg Type Confidence: 88.1%
Avg Health Confidence: 56.8%
